

Planetka Terms of Service

Last updated: 2026-06-04

1. Scope

These Terms govern access to Planetka-hosted data, Planetka Cloud services, and use of Planetka-rendered outputs. The Planetka add-on source code may be distributed under a separate software licence. These Terms govern the hosted Planetka service and streamed data.

2. Free And Pro

Planetka has two product options: Free and Pro.

Free provides access to the public Planetka add-on and Planetka Cloud on a fair-use, best-effort basis. Free access does not guarantee uninterrupted service, permanent availability of every hosted asset, priority support, or dedicated production assistance.

Pro is the paid production option. Pro may include priority support, guaranteed-service arrangements, offline data packages, private deployments, studio/pipeline integration, or other paid services offered by Planetka.

Free and Pro use the same add-on codebase. Planetka may make different hosted data, cloud presets, asset catalogues, support, or offline-data services available to each edition.

3. Planetka Cloud Access

Planetka currently uses automatic anonymous install/session access for Planetka Cloud data. Planetka may use install/session identifiers, device/session checks, abuse controls, IP-based controls, request limits, and temporary throttling to protect service reliability, prevent scraping, and revoke compromised access.

4. Hosted Data And Cache

Planetka streams required data into a working cache. Planetka is not a raw-data download product and does not provide a reusable texture-data archive unless a separate Pro offline data package is explicitly arranged.

You may not scrape, bulk-download, reconstruct, redistribute, resell, sublicense, host, publish, extract, or expose Planetka-hosted data as standalone map tiles, source imagery, a dataset, a GIS product, a texture pack, an API, a tile server, a training dataset, or a competing service.

5. Rendered Output

You may use rendered outputs created with Planetka, including still images, videos, animations, VFX shots, educational material, and client deliverables.

You are responsible for following required attribution obligations in published work where source datasets require attribution.

6. Fair Usage And Abuse Protection

Planetka may apply request limits, caching rules, telemetry, abuse detection, device/session checks, and temporary throttling to protect the service and hosted data.

Planetka may suspend, restrict, or revoke access where needed for security incidents, automated scraping, excessive abuse, or breach of these Terms.

7. Attribution And Data Sources

Some underlying data sources require attribution. Planetka documentation includes attribution guidance where needed.

Planetka data is visualisation data and is not suitable for navigation, surveying, safety-critical use, legal boundary determination, or any other use requiring authoritative geospatial accuracy.

8. Payments And Services

Free access may be offered without payment. Pro services, offline data packages, private deployments, custom production work, or support arrangements may be paid.

Payments are handled by the payment provider, marketplace, invoice, or written agreement used for that service. Planetka does not store full payment-card details.

9. Availability

Planetka depends on hosted infrastructure, storage providers, Blender compatibility, graphics drivers, and network availability. Planetka is provided as-is and as-available unless a separate Pro service agreement states otherwise.

10. Contact

For support, service questions, Pro services, offline deployment, or enterprise arrangements, contact Planetka through the support or contact address provided on planetka.io.
